

Training Options

Flexible Trainings that Work with Your Schedule

To maximize Unite Us' impact, we recommend users attend at least one training. We offer a variety of training formats to accommodate varied schedules and preferred learning methods. All trainings are available to new and existing users.

Online Learning

A series of self-guided courses for new and existing users. The New User courses offer interactive and audio guidance as students navigate through the core functions of the software.

In-Person Training

Members of the Unite Us team host training in the community to educate new and existing organizations about the platform. In-person trainings work best when all attendees have computer access, as users will follow the trainer and practice core functions in real-time.

Webinars

Members of the Unite Us team host weekly webinars. During the webinar, the host will go over the purpose of a coordinated care network and perform a live software demonstration in the Unite Us training environment.

Support Center

Active Unite Us users have access to 75+ articles explaining Frequently Asked Questions and key features. The Support Center is a growing library of resources for all users.
